DCA318 Return End Extra Kapton

TS-SSC 91-227 S. Delchamps November 22, 1991

Magnet Name	Average Interior Diameter - nom. (mils)	Extra Layers of 5 mil kapton	Hy- draulic Pressure (psi)	Pi-tape De- flection (mils)
DCA313	-9±3	0	6029	3?
DCA314	-5±2	1	6300	4
DCA315	-5±1	1	7491	4
DCA316	-2±3	2	9800	5
DCA317	-7±3	1	9800	5
DCA318	2±3			100 Tax 100 Tax

The second column of the table shows the average interior diameter (with the nominal value subtracted) of the return end clamp insulators shimmed tightly inside the return end clamp cylinder, measured with a telescoping micrometer¹. The average has been performed over measurements between quadrant pairs I-III and II-IV at axial positions 1/4", 1", and 2" from the collared coil end of the end clamp cylinder.

The DCA318 insulator average interior diameter is consistent with the nominal diameter. This is similar to the case of DCA316, which had sufficient loading with two additional layers of kapton. I therefore recommend using two 5 mil layers of kapton on the interior surfaces of the DCA318 return end insulators to insure adequate clamping.
