

PRELIMINARY RESULTS FROM FERMILAB E-800 ON THE
POLARIZATION OF Ξ^- 's AND Ω^- 's PRODUCED BY
POLARIZED AND UNPOLARIZED NEUTRAL BEAMS

Preliminary Results.

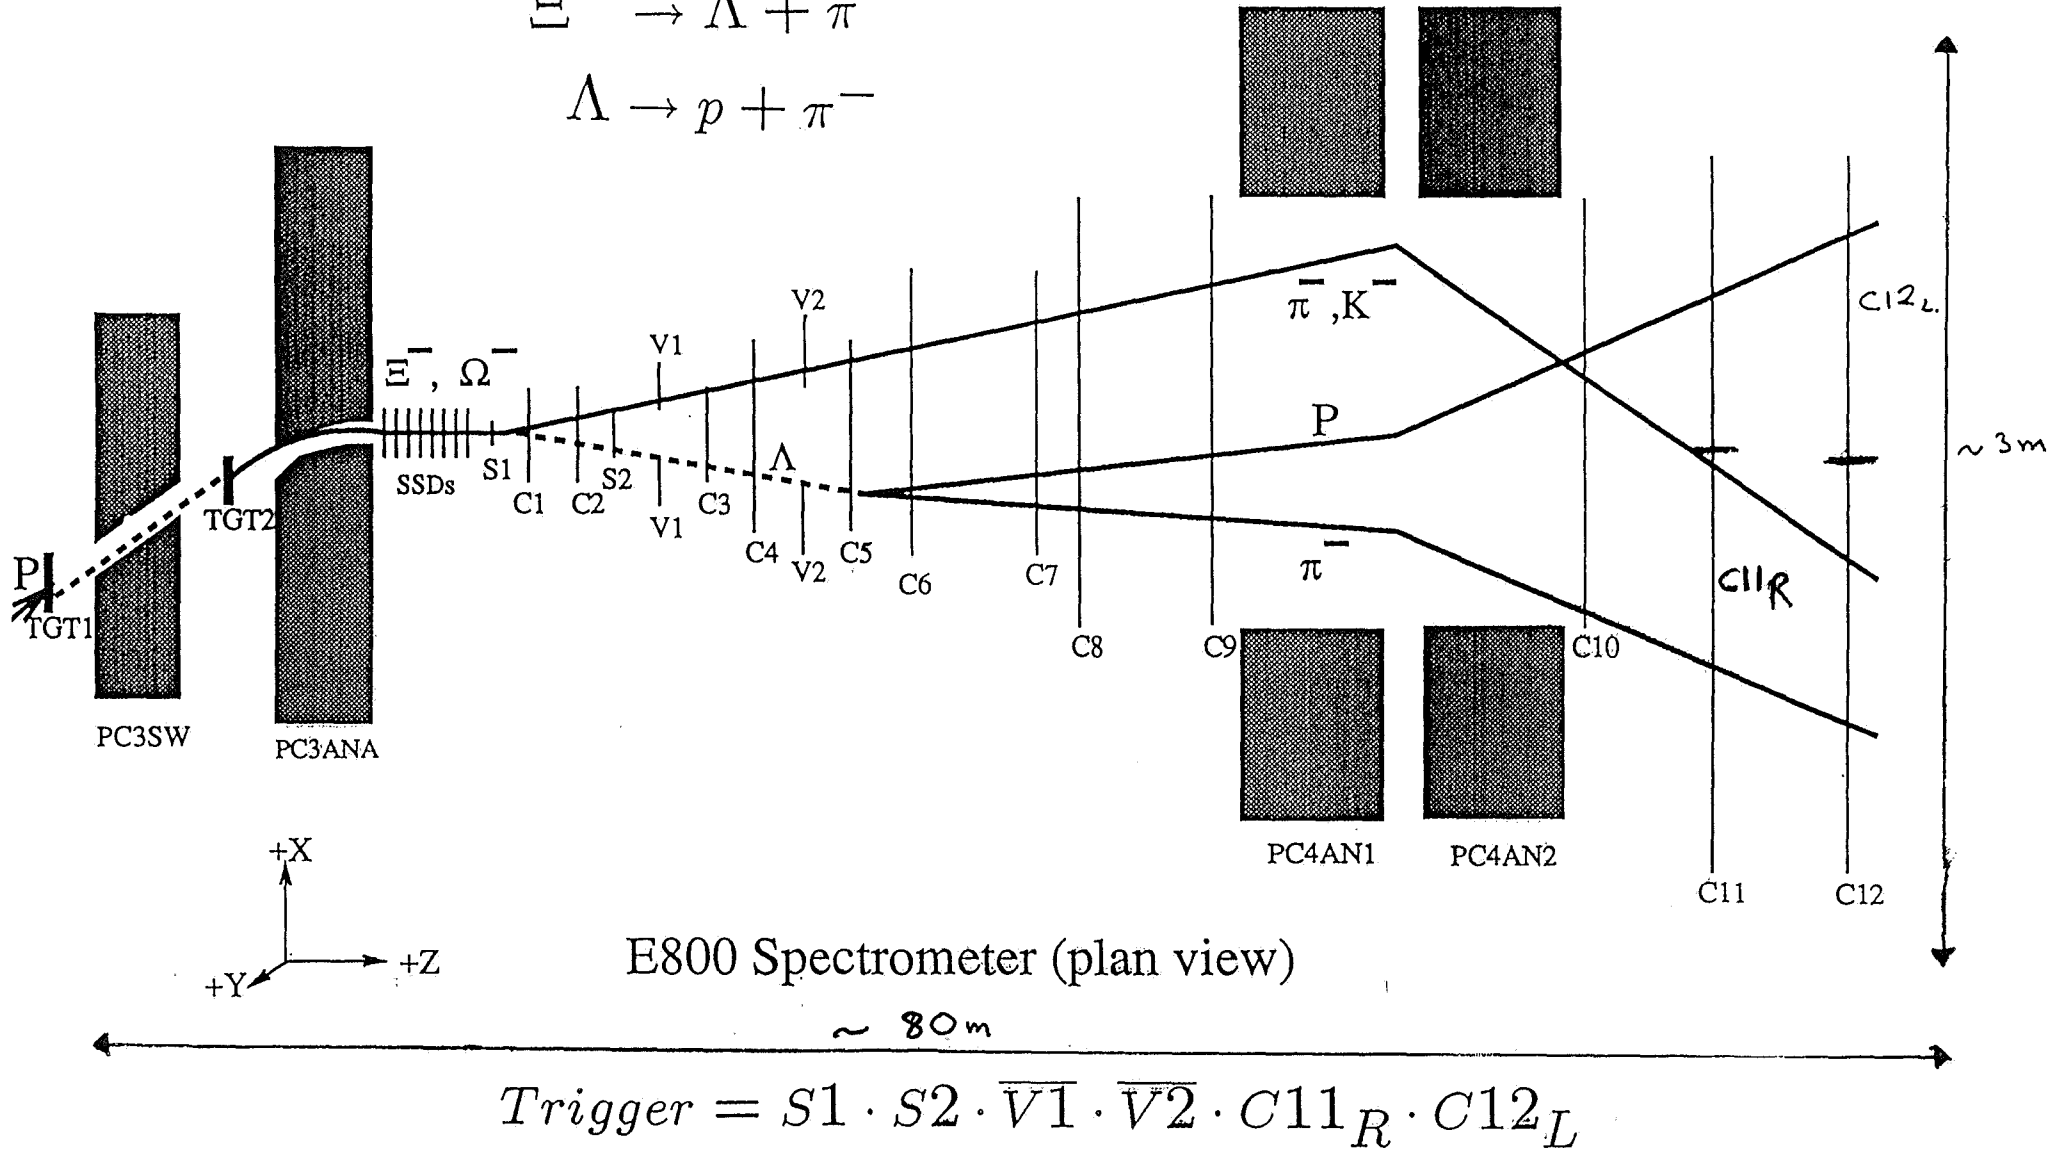

1.5 Million Ξ^- (3% of sample)
78K Ω^- (40% of sample)

Previous polarization results for 400 GeV protons at 7.5 mrad production angle

800 GeV Protons at 2 mrad.

Elevation View

a) Proton Production

b) Spin-transfer Production

c) Neutral Production

$$\Xi^0 : K^0 : \Lambda^0 : n : \gamma \approx 1 : 2 : 10 : 200 : 2000$$

$$\vec{P}_\Lambda = \gamma_\Xi \vec{P}_\Xi$$

$$\vec{P}_\Omega = \vec{P}_\Lambda$$

$$\frac{dn}{d(\cos\theta_i)} = \frac{1}{2}(1 + \alpha_\Lambda P_{\Lambda i} \cos\theta_i)$$

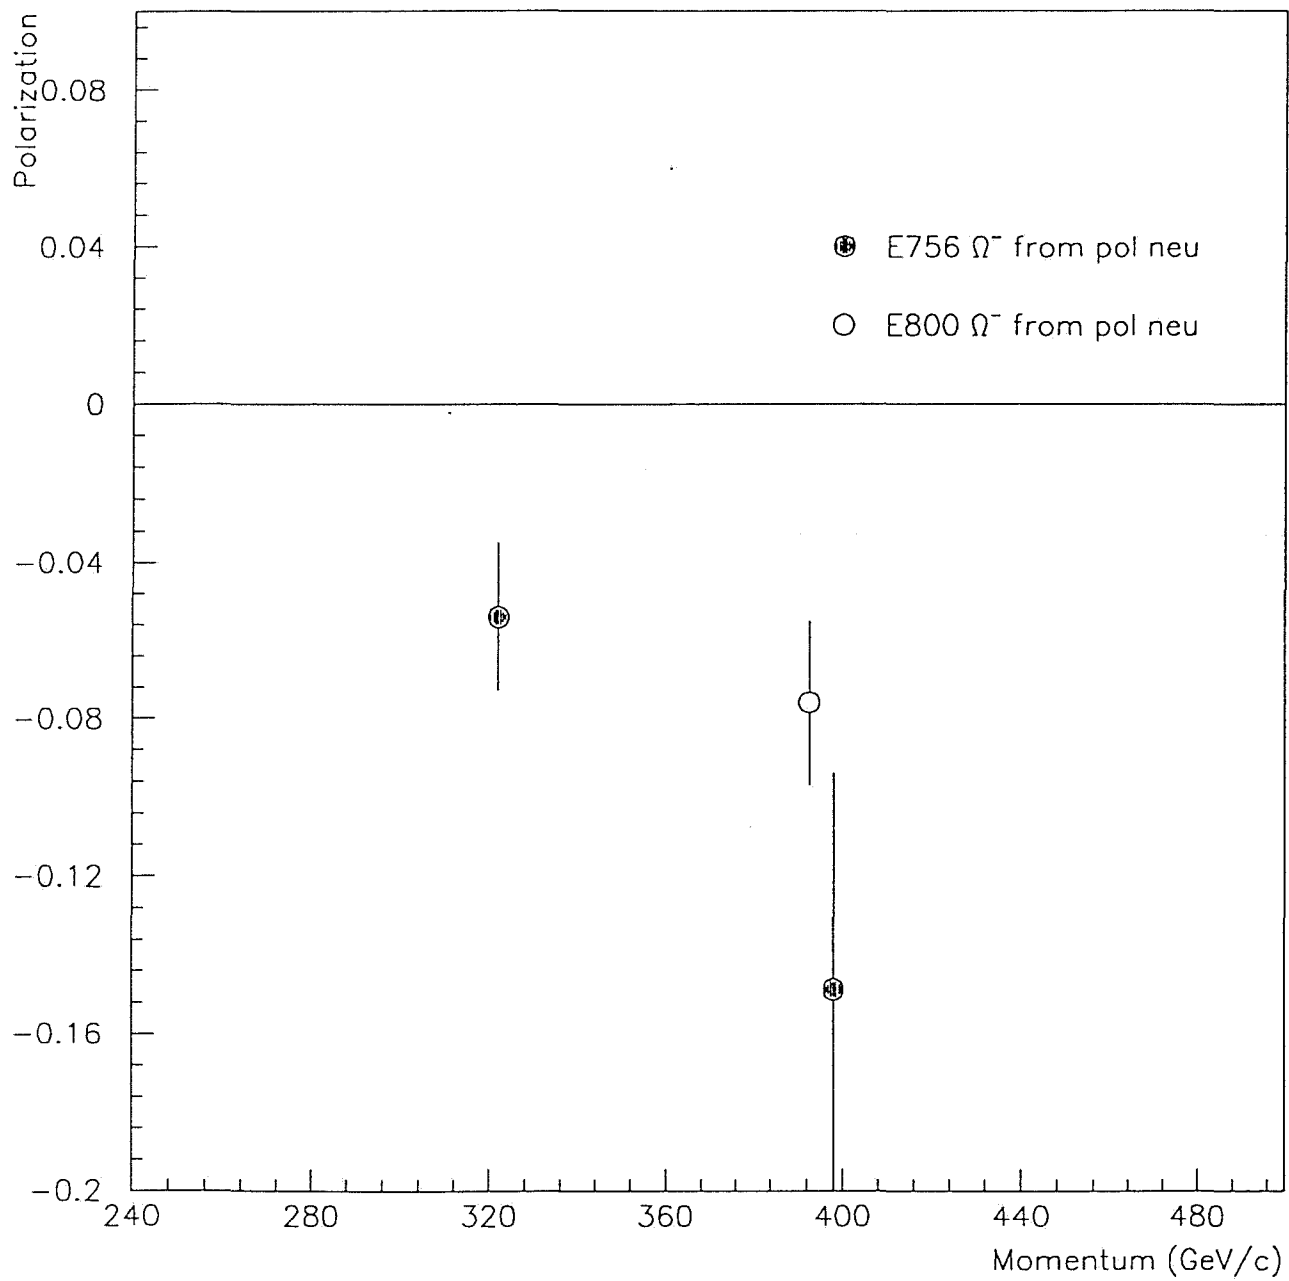

100% Acceptance

Real Data

Preliminary polarization results.

Average Momentum for all samples is 395 GeV/c

All errors are statistical only.

Spin transfer

$$\Xi^- \text{'s: } -0.1172 \pm 0.0062$$

$$\Omega^- \text{'s: } -0.076 \pm 0.021$$

Neutral production at 2 mrad

$$\Xi^- \text{'s: } 0.0062 \pm 0.0042$$

$$\Omega^- \text{'s: } 0.053 \pm 0.012$$

0 mrad production

$$\Xi^- \text{'s: } -0.0042 \pm 0.0062$$

What result might be expected for
neutral production Ω^- 's?

$$\begin{array}{llll} n \rightarrow \Omega^- & \sim & p \rightarrow \Omega^- & P = 0 \\ \Lambda \rightarrow \Omega^- & \sim & p \rightarrow \Xi^- & P = \text{---} \\ \Xi^0 \rightarrow \Omega^- & \sim & p \rightarrow \Lambda^0 & P = \text{---} \end{array}$$
