

Future ElectroWeak Physics
at the
Fermilab Tevatron
Report of the *tev_2000* Study Group

FERMILAB-PUB-96/082

DØ Note 2589 & CDF Note 3177

Editors:

D. Amidei

Department of Physics, University of Michigan

and

R. Brock

Department of Physics and Astronomy, Michigan State University

April 1, 1996

Authors of the tev_2000 Study

Top Physics [D. Amidei^{um}]

P. Baringer,^{uk} N. Eddy,^{um} A. P. Heinson,^{ucr} U. Heintz,^{fnal} S. B. Kim,^{um} T. LeCompte,^{ui} T. Liss,^{ui} M. Narain,^{fnal} K. Tollefson,^{ur} S. Vejcik,^{um} B. Winer,^{cu} D. Winn^{um}

Intermediate Vector Boson Physics [U. Baur,^{sunyb} M. Demarteau,^{fnal} and S. Errede^{ui}]

H. Aihara,^{lbl} C. Balazs,^{msu} W. Carithers,^{lbl} T. Diehl,^{fnal} J. Ellison,^{ucr} D. Errede,^{ui} T.A. Fuess,^{anl} T. Han,^{ucd} Y.K. Kim,^{lbl} G. Landsberg,^{fnal} L. Nodulman,^{anl} J. Ohnemus,^{lbl} T. Spadafora,^{lbl} R. Sobey,^{ucd} G. Valencia,^{isu} R. Wagner,^{anl} C. Wendt,^{uw} D. Wood,^{fnal} C.P. Yuan,^{msu} D. Zeppenfeld^{uw}

Light Higgs Physics [U. Heintz,^{fnal} S. Kuhlmann,^{anl} and S. Willenbrock^{ui}]

P. Agrawal,^{msu} D. Bowser–Chao,^{msu} J. Cochran,^{ucr} S. Mrenna,^{anl} E. Shabalina,^{msur} T. Stelzer,^{uw} J. Womersley^{fnal}

Supersymmetric Physics [K. De,^{uta} and T. Kamon^{tam}]

R. Arnowitt,^{tam} H. Baer,^{fsu} C. Chen,^{fsu} D. Claes,^{sb} M. Gold,^{unm} G.L. Kane,^{um} C. Kao,^{ur} F. Keyvan,^{ucla} G. Kribs,^{um} J.L. Lopez,^{ru} S. Mrenna,^{anl} D. Norman,^{tam} L. Sawyer,^{uta} J. Sender,^{uh} T.L. Thomas,^{unm} J. Wells,^{slac} J.T. White,^{tam} J. Wolinski^{tam}

Exotic Physics [R. Harris^{fnal}]

J. Huston,^{msu} K. Maeshima,^{fnal} D. Norman,^{tam} S. Kopp,^{uc} M. Gold,^{unm} A. Laasanen^{pu}

Physics with a Polarized Proton Beam [R. Brock,^{msu} G. Ladinsky,^{msu} and H. Weerts^{msu}]

D. Stump,^{msu} M. Wiest^{msu}

Detector Requirements [J. Womersley^{fnal}]

T. Kamon,^{tam} D. Norman,^{tam} J.T. White,^{tam} J. Wolinski^{tam}

^{anl} Argonne National Laboratory, ^{ucd} University of California at Davis, ^{ucla} University of California at Los Angeles, ^{ucr} University of California, Riverside, ^{uc} University of Chicago, ^{cu} Columbia University, ^{fnal} Fermi National Laboratory, ^{fsu} Florida State University, ^{uh} University of Hawaii, ^{isu} Iowa State University, ^{ui} University of Illinois, ^{uk} University of Kansas, ^{lbl} Lawrence Berkeley Laboratory, ^{um} University of Michigan, ^{msu} Michigan State University, ^{msur} Moscow State University, ^{sunyb} State University of New York, Buffalo, ^{sb} State University of New York, Stony Brook, ^{unm} University of New Mexico, ^{nu} Northeastern University, ^{pu} Purdue University, ^{ru} Rice University, ^{ur} University of Rochester, ^{snu} Seoul National University, ^{slac} Stanford Linear Accelerator Center, ^{tam} Texas A& M University, ^{uta} University of Texas, Arlington, ^{uw} University of Wisconsin

Contents

Authors of the <i>tev_2000</i> Study	i
1 Foreword	1
1.1 The Potential for Tevatron Evolution	2
1.2 The <i>tev_2000</i> Effort	3
2 Physics Conclusions and General Recommendations	5
2.1 Conclusions of the Physics Groups	5
2.1.1 Top Physics	5
2.1.2 Intermediate Vector Boson Physics	6
2.1.3 Light Higgs Physics	7
2.1.4 Supersymmetric Physics	8
2.1.5 Exotic Physics	9
2.1.6 Physics with Polarized Protons	10
2.1.7 Detector Challenges	10
2.2 Recommendations	11
2.2.1 Recommendations to Fermilab	11
2.2.2 Recommendations beyond Fermilab	12
3 Top Physics	13
3.1 Introduction	13
3.2 Event Samples in $t\bar{t}$	14
3.2.1 Top Event Selection	14
3.2.2 Future Top Selection	15
3.2.3 Yields	16
3.3 Measurement of the Top Quark Mass	17
3.3.1 Mass Reconstruction in Lepton+Jets Using a Constrained Fit	18
3.3.2 Experimental Issues in the Constrained Fit	18
3.3.3 Future Precision of the Constrained Fit	20
3.3.4 Elaborations on Future Precision of the Constrained Fit	22

3.3.5	Top Mass Measurement in the Dilepton Mode	24
3.3.6	Methodology in the Dilepton Mode	25
3.3.7	Dilepton Mass measurement	26
3.3.8	Future prospects in the Dilepton Mode	26
3.3.9	Conclusions on Dilepton Mass Measurement	28
3.3.10	Ultimate Top Quark Mass Precision at the Tevatron	28
3.4	Top Quark Production	29
3.4.1	Measurement of the $t\bar{t}$ Production Cross Section	29
3.4.2	The ratio of dilepton to l+jets production rates	31
3.4.3	Search for $t\bar{t}$ Resonances	32
3.5	Top Quark Decays	34
3.5.1	The Structure of the Wtb Vertex	34
3.5.2	Measurement of a $t \rightarrow b$ Branching Fraction and Limit on V_{tb}	38
3.5.3	Measurement of a $t \rightarrow W$ Branching Fraction	40
3.5.4	$t \rightarrow H^\pm b$	41
3.5.5	Rare Top Decays to W , Z , and γ	42
3.6	The Physics of Single Top Quark Production	44
3.6.1	Single Top Quark Simulation	45
3.6.2	Single Top Analysis	46
3.6.3	The Single Top Quark Cross Section	49
3.6.4	Top Quark Decay Width and $ V_{tb} $ from Single Top	50
3.6.5	Isolation of the W^* Process and a Separate Measurement of $ V_{tb} $	51
3.6.6	Other Physics Measurements with Single Top	51
3.6.7	Conclusions for Single Top	52
3.7	Top Physics at Other Facilities	52
3.7.1	NLC	52
3.7.2	LHC	53
3.8	Conclusions	55
4	Intermediate Vector Boson Physics	63
4.1	Introduction	63
4.2	W Mass and Width Measurement	65
4.2.1	Preliminaries	65
4.2.2	W Mass Measurement at a Superluminous Tevatron	65
4.2.3	Comparison with LEP II and LHC	70
4.2.4	Physics Significance of the W Mass Measurement at an Upgraded Tevatron	70
4.2.5	W Width and Branching Fraction Measurements	73

4.3	Weak Boson Asymmetries	75
4.4	Determination of α_s from the Z Boson p_T Distribution	79
4.5	Rare W and Z Decays	80
4.5.1	Theoretical Overview	80
4.5.2	Experimental Aspects	84
4.6	Searching for CP Violation in W Production and Decay	87
4.6.1	Preliminaries	87
4.6.2	$p\bar{p} \rightarrow W^\pm X \rightarrow \ell^\pm \nu X$	88
4.6.3	$p\bar{p} \rightarrow W^\pm + 1 \text{ jet} \rightarrow \ell^\pm \nu + 1 \text{ jet}$	89
4.6.4	Detector Requirements	90
4.7	Di-boson Production and Anomalous Gauge Boson Couplings	93
4.7.1	Introduction	93
4.7.2	Present Tevatron Limits	95
4.7.3	Expectations for the Main Injector Era and Beyond	97
4.7.4	Comparison with LEP II and LHC	103
4.7.5	Radiation Zero and Rapidity Correlations in $W\gamma$ Production	105
4.7.6	Probing QCD in $W\gamma$ Production	109
4.8	Triple Gauge Boson Production	111
4.9	Conclusions	112
5	Light Higgs Physics at the Tevatron	120
5.1	Introduction	120
5.2	$q\bar{q} \rightarrow WH$ with $H \rightarrow b\bar{b}$	121
5.2.1	Introduction and Selection Cuts	121
5.2.2	$W + 2$ Jet Backgrounds to WH , b tagging	122
5.2.3	Backgrounds to WH containing heavy quarks	123
5.2.4	Signal+Background Distributions	124
5.2.5	Comparison with LHC	125
5.2.6	Dijet Mass Resolutions	125
5.2.7	Masses above 100 GeV	126
5.2.8	Conclusions for $q\bar{q} \rightarrow WH$ with $H \rightarrow b\bar{b}$	127
5.3	$q\bar{q} \rightarrow (W, Z)H$ with $H \rightarrow \tau^+\tau^-$	149
5.3.1	Signal Process	149
5.3.2	Background Processes	149
5.3.3	Detector Requirements	150
5.3.4	Signal and Background Yields	150
5.3.5	$\tau\tau$ Mass Resolution	150
5.3.6	Significance of Signal	151

5.3.7	Conclusions on $H \rightarrow \tau\tau$ Mode	153
5.4	Other Accelerators	153
5.4.1	LEP II	153
5.4.2	LHC	153
5.4.3	NLC	153
5.5	Conclusions	154
6	Supersymmetric Physics	157
6.1	Introduction	157
6.2	Motivations for SUSY	158
6.3	The SUSY Particle Spectrum	160
6.4	“SUSY Physics” Search Strategies at TeV33	161
6.5	Physics Reaches at TeV33	163
6.5.1	Search for the Lightest Chargino using Trilepton Events	163
6.5.2	Search for Gluinos using Missing E_T + Multijet Events	168
6.5.3	Light Top Squark Search	172
6.5.4	Summary	176
7	Prospects for Exotic Physics at the Tevatron	181
7.1	Introduction	181
7.1.1	TeV2000 Exotics Group	181
7.1.2	Motivation	181
7.1.3	Technique	182
7.2	Extended Gauge Theories	182
7.2.1	New Gauge Bosons W' and Z'	182
	$W' \rightarrow l\nu$	182
	$W' \rightarrow$ dijets	183
	$Z' \rightarrow ll$	183
	$Z' \rightarrow$ dijets	184
	New Gauge Boson Summary	184
7.2.2	E_6 diquarks \rightarrow dijets	185
7.2.3	Axiguons \rightarrow dijets	185
7.2.4	Topcolor	186
7.2.5	Leptoquarks	186
	First Generation Leptoquarks	186
	Second Generation Leptoquarks	187
7.3	Compositeness	188
7.3.1	Contact Interactions	188
	$\Lambda(qqqq)$	188

	$\Lambda(qqll)$	188
7.3.2	Excited Quarks	189
	$q^* \rightarrow q\gamma, qW$	189
	$q^* \rightarrow qq$	190
	Excited Quark Summary	190
7.3.3	Technicolor	190
	Color Octet Technirho $\rho_T \rightarrow$ dijets	190
7.4	Miscellaneous Phenomena	191
7.4.1	Massive Stable Particles	191
7.5	Summary and Conclusions	192
8	Physics with a Polarized Proton Beam at the Tevatron	204
8.1	Introduction	204
8.2	Longitudinal Polarization	205
8.2.1	Inclusive High P_T Processes	205
8.2.2	Asymmetries at One Loop	213
8.2.3	Transverse Polarization	213
8.3	Summary	214
9	Detector Requirements	216
9.1	Detector Systems	216
9.1.1	Tracking and Vertex-tagging	216
9.1.2	Calorimetry	217
9.1.3	Muon Detection	218
9.2	Lepton Isolation at High Luminosity	218
9.3	Missing E_T at High Luminosity	220
9.4	Trigger and Data Acquisition	221
9.4.1	Available Bandwidth	222
9.4.2	A Toy Trigger Menu	222
9.5	Offline Processing	223
10	Afterword	224
