### **EDELWEISS Collaboration**

- ***CEA-Saclay DAPNIA:*** G. Chardin, H. Deschamps, G. Gerbier, M. Gros, S. Hervé, A. de Lesquen, M. Loidl, J. Mallet, L. Mosca, X-F. Navick, F. Nizery, L. Shoeffel
- ***CEA-Saclay DRECAM:*** M. Chapellier, P. Pari
- ***CRTBT Grenoble:*** A. Benoit, M. Caussignac, H. Rodenas
- ***CSNSM Orsay:*** L. Bergé, A. Broniatowski, L. Dumoulin, A. Juillard S. Marnieros, N. Mirabolfathi, S. Collin
- ***IAP Paris:*** C. Goldbach, M. Martin, G. Nollez
- ***IPN Lyon:*** A. Bonneveaux, B. Chambon, L. Chabert, D. Drain, J. Gascon, M. Goyot, J-P. Hadjout M. De Jesus, O. Martineau, M. Stern, L. Vagneron, P. Di Stefano
- ***Laboratoire souterrain de Modane « Fréjus lab »:*** Ph. Charvin, C. Riccio

*1kg stage of EDELWEISS-I:  
3\*320 g Ge.*

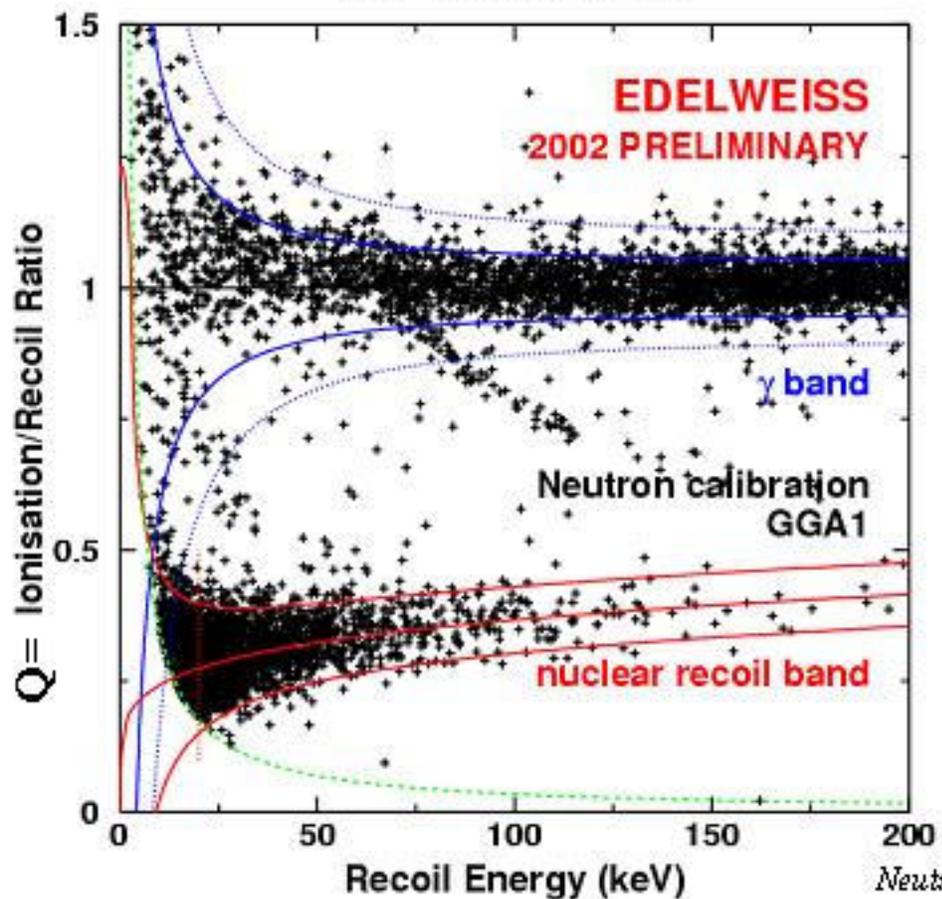

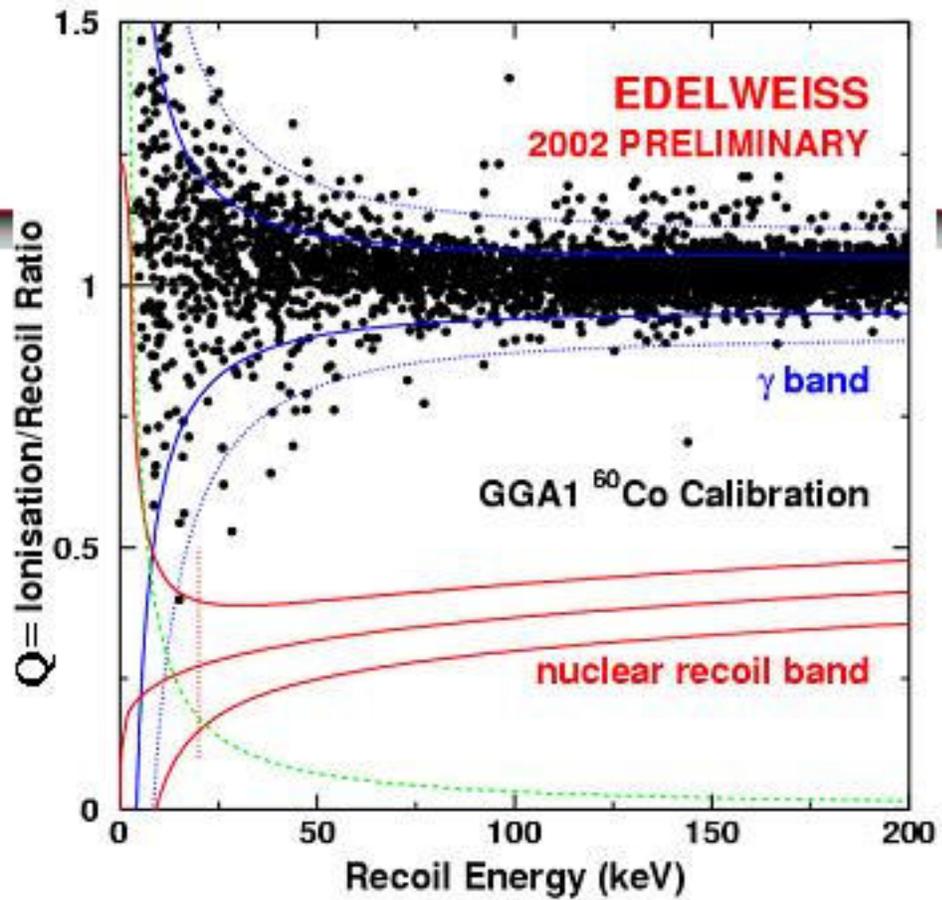

- *GGA1: heat and ionisation Ge detector*
- *aluminium electrodes (center + guard ring) + Ge amorphous layer*
- *NTD sensor on guard ring electrode*

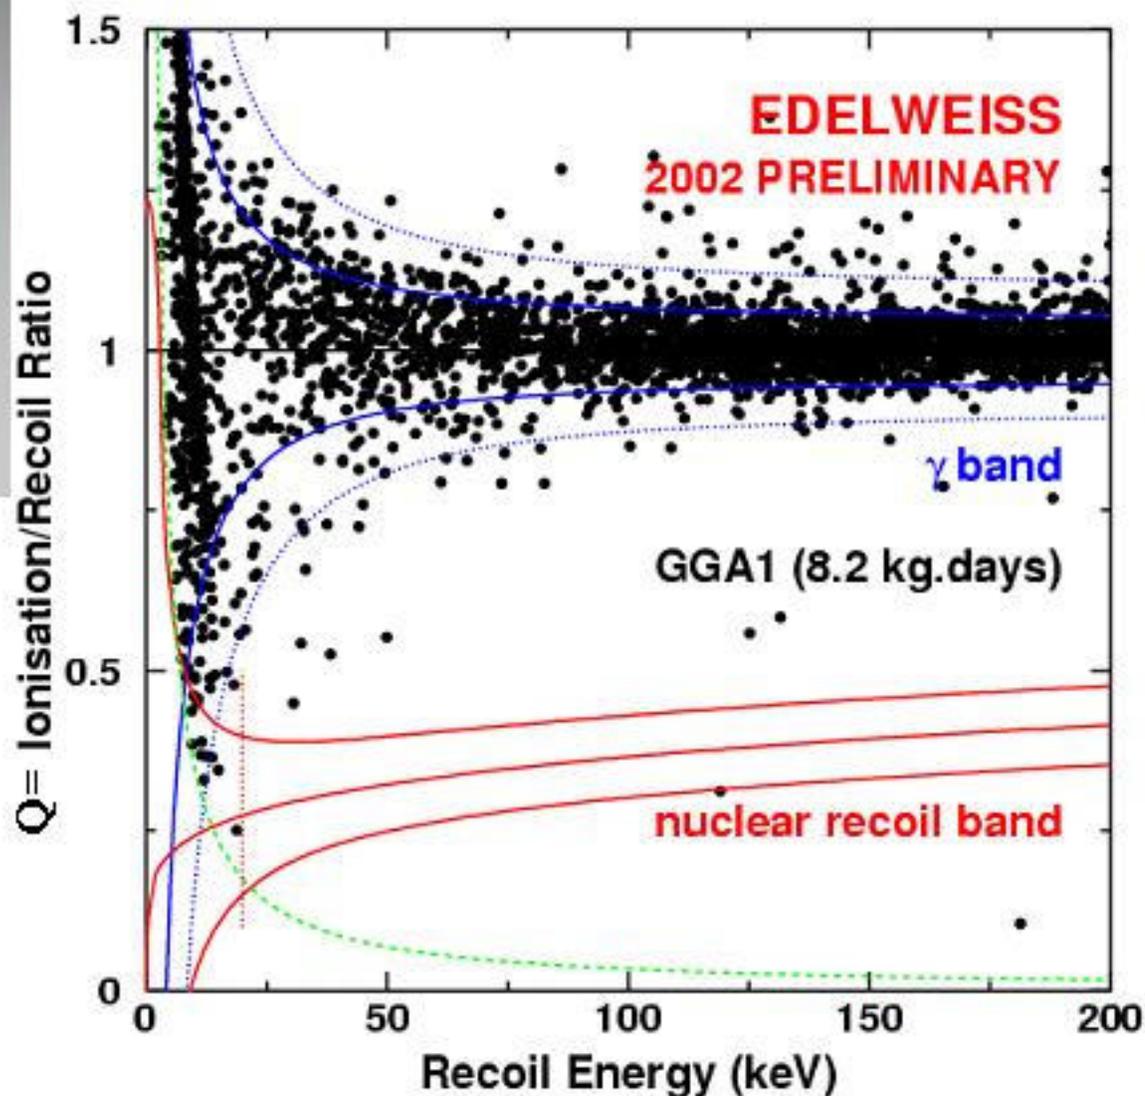

*320g largest mass bolometer with double-detection capability*

- *Low radioactivity cryostat*
- *Shield: 30 cm paraffin, 20 cm Pb, 10 cm Cu*
- *Installed in **Fréjus Lab** 4800 mwe*
- *Low neutron background  $1.6 \cdot 10^6$  n/cm<sup>2</sup>/s*
  
- *Resolutions @ 10 keV (resp 122) keV:*
  - *ionisation : 1.3 keV (2.2 keV)*
  - *heat : 1.0 keV (3.0 keV)*

# GGA1 $\gamma$ and neutron calibrations

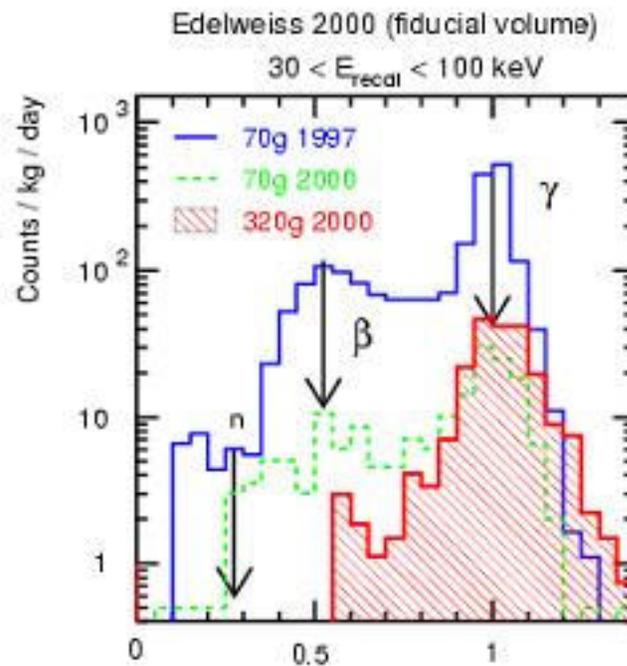

# EDELWEISS-I : 2002 data from GGA1 detector

- *3 consecutive month data acquisition with no warm up*
- *1 event at 120 keV in (?) nuclear recoil zone (90%) in fiducial central volume (54% of 320 g mass) 8.2 kg.d*

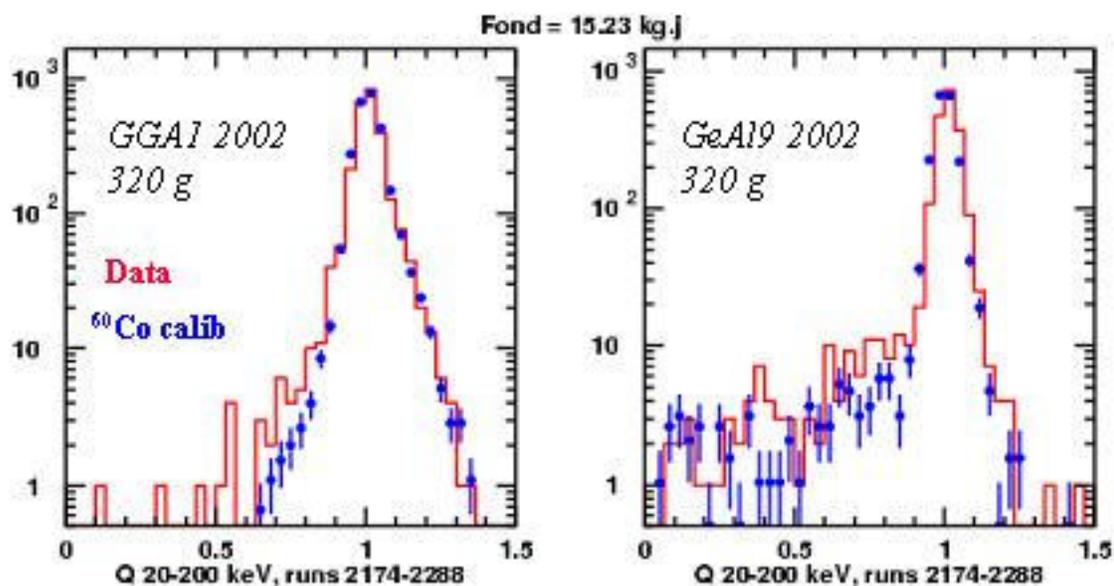

# EDELWEISS-I

1997-2002 : improvement of  
detector qualities :  $Q$  distributions

1997  
13 evts/kg.d in  
nucl recoil zone

2002/05/24 19.16

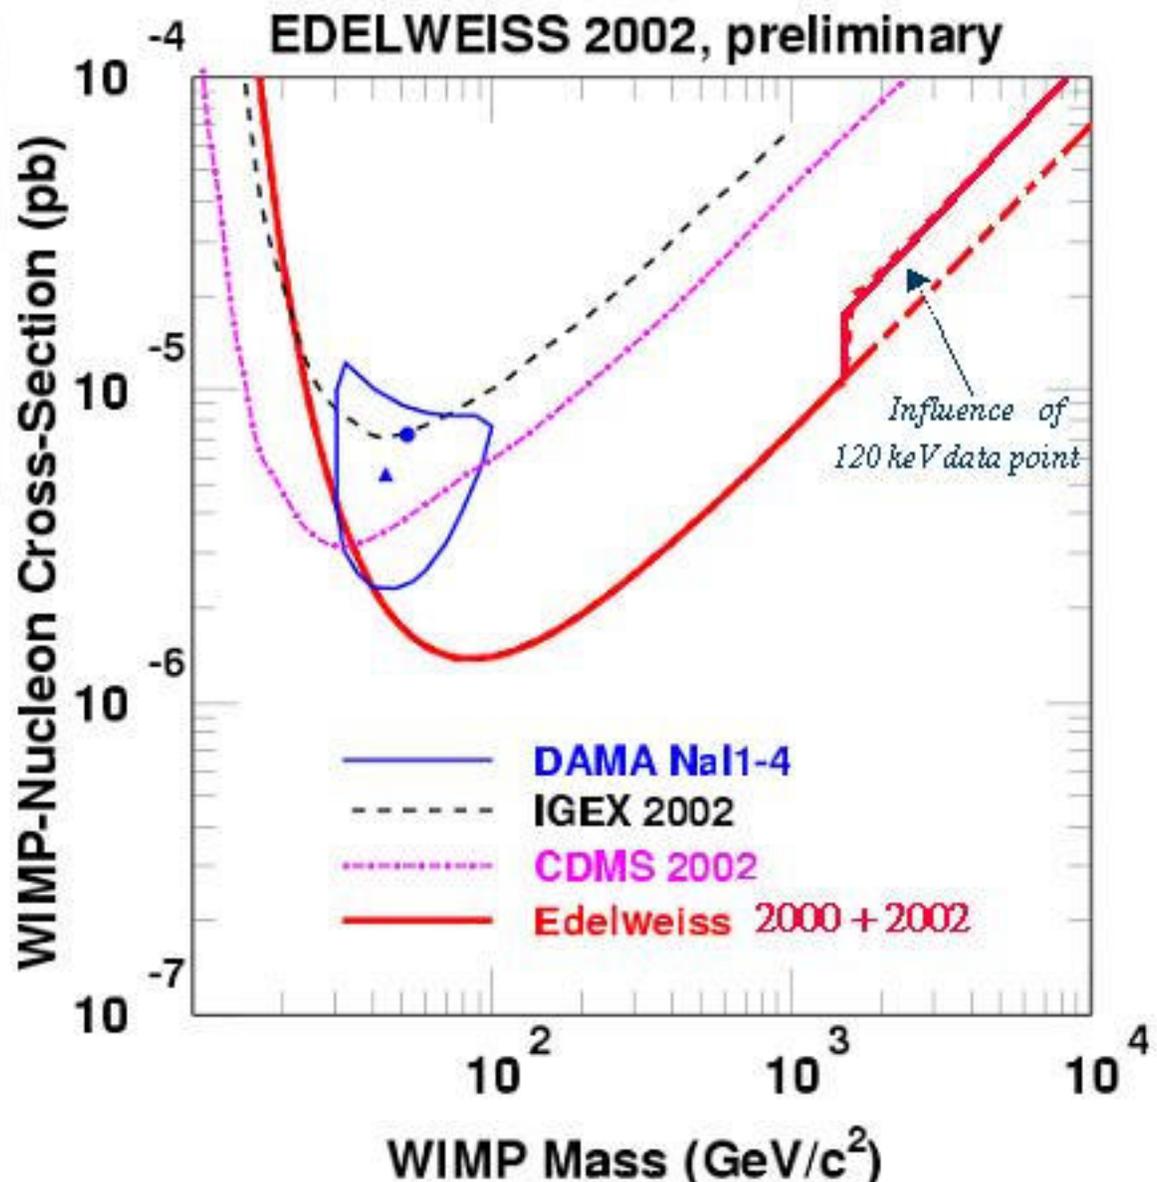

2002  
< 0.3 evts/kg.d in  
nucl recoil zone

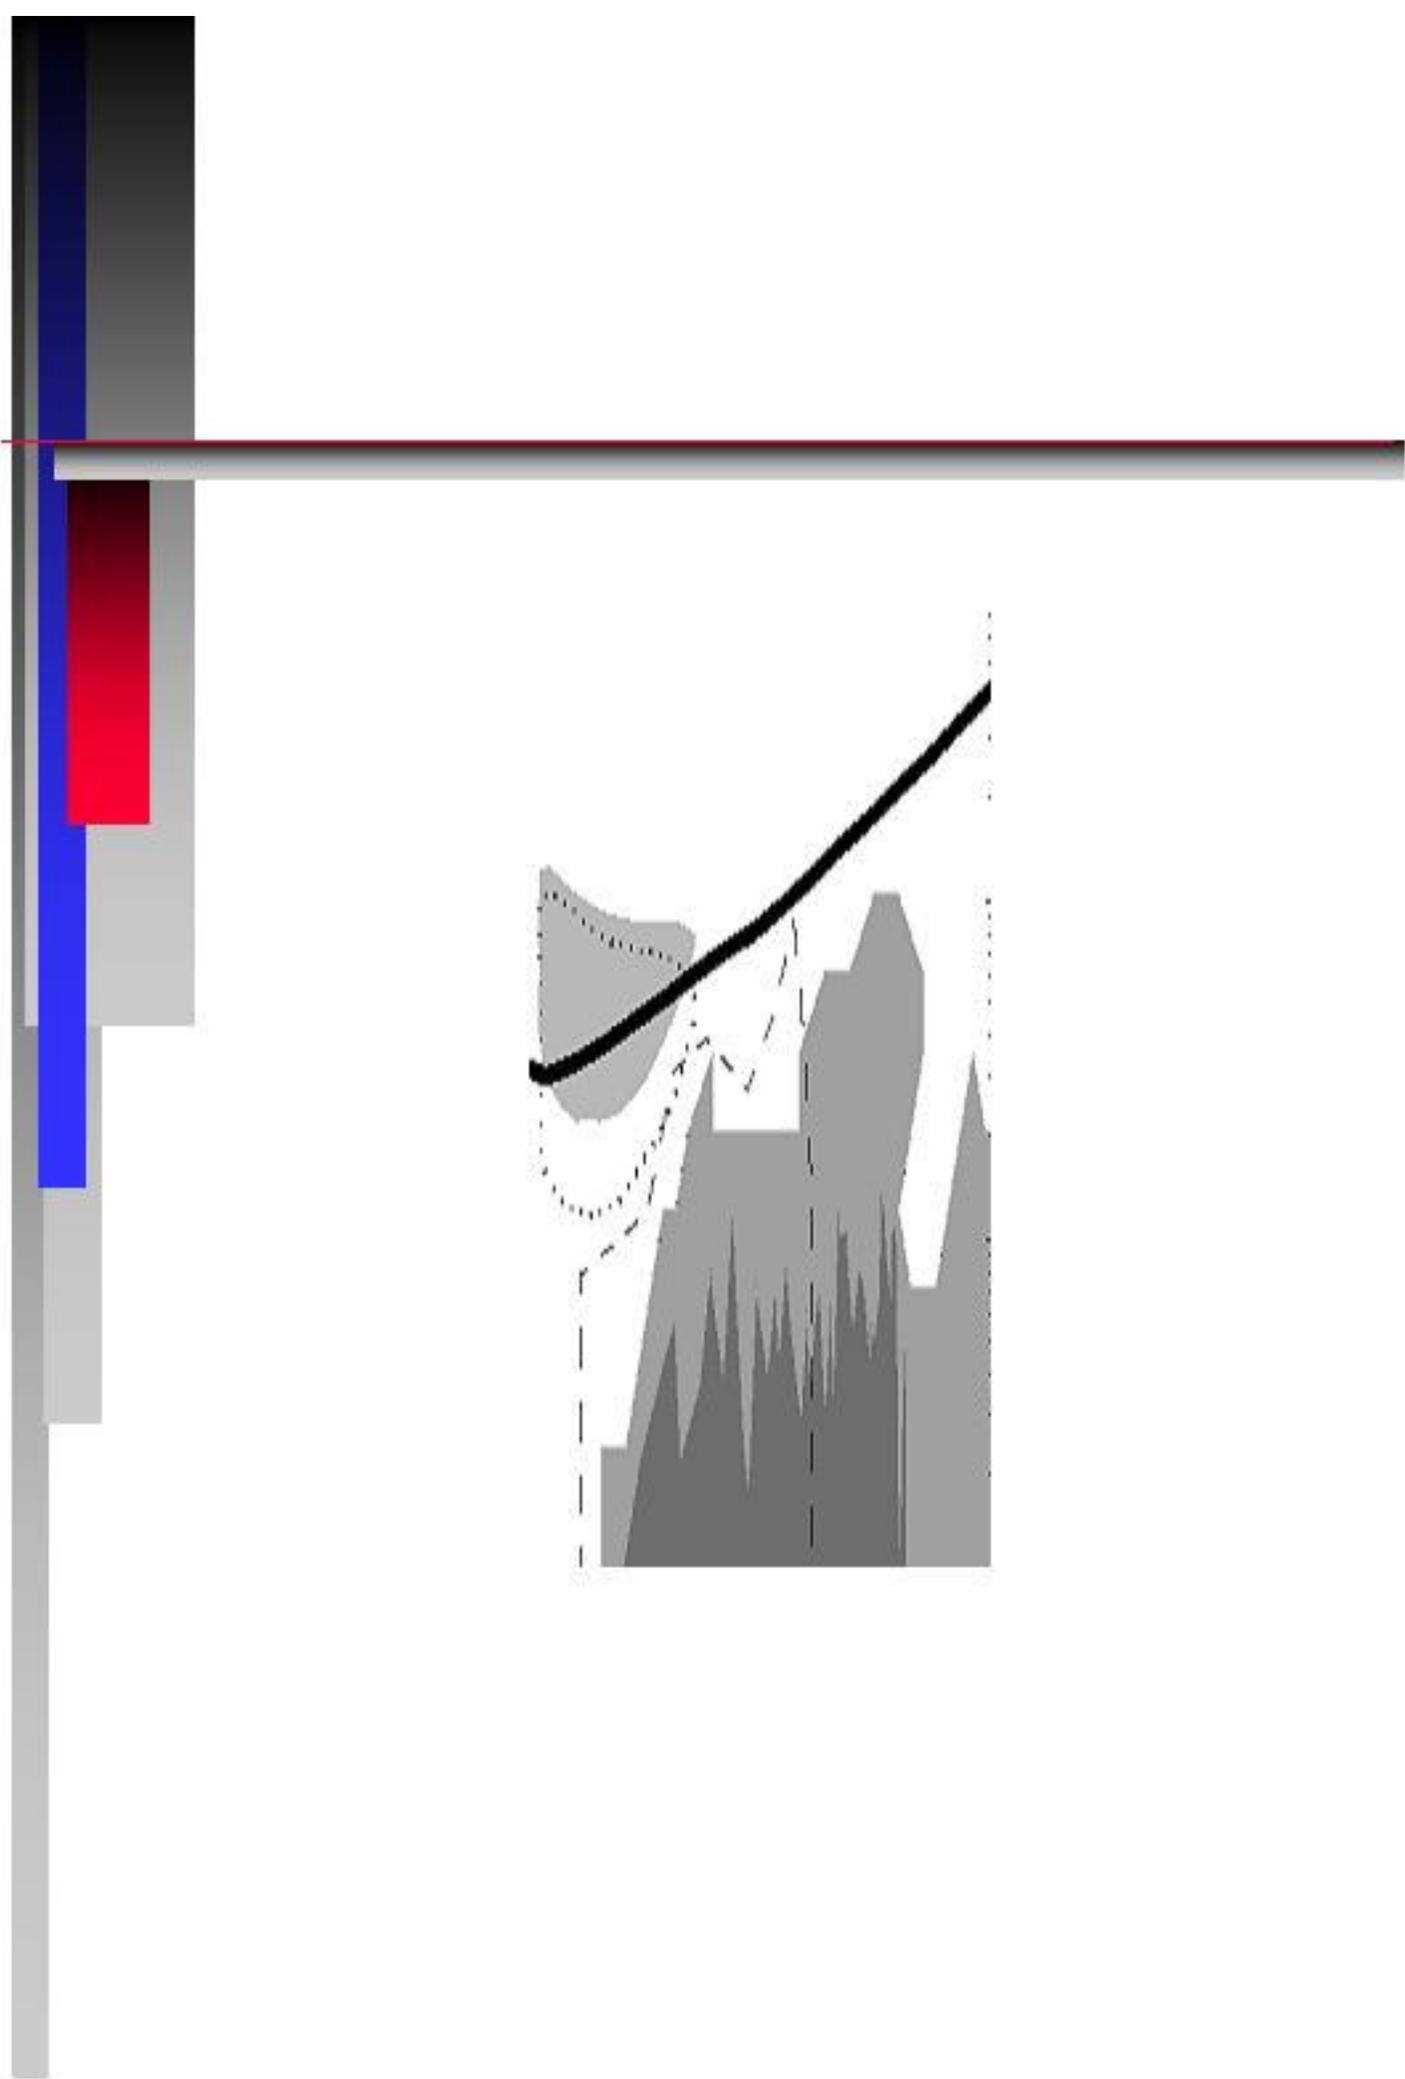

2002  
2.2 evts/kg.d in  
nucl recoil zone

Neutrino 2002

*EDELWEISS-I 05/2002*  
*Present sensitivity for*  
*spin independent WIMPs (bis)*

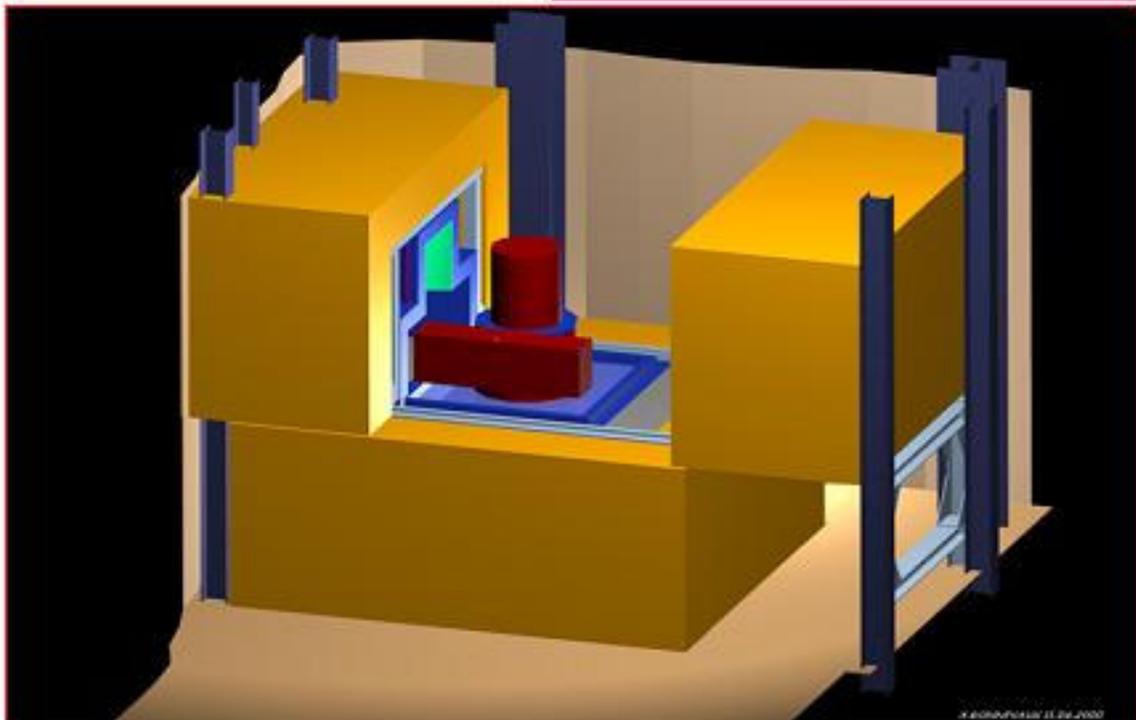

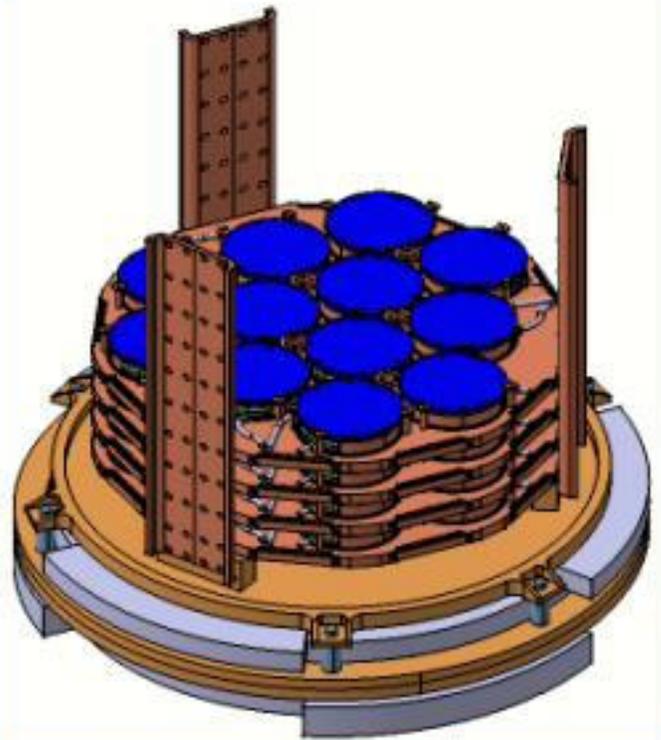

- *Standard halo assumed, mean velocity of 220 km/s*
- *WIMP signal acceptance = 95 %*
- *Exposures (fiducial-corrected for recoil and WIMP acceptances) : 2000 data (5.0 kg.d- 4.3 kg.d) cumulated with 2002 data (8.2 kg.d-7.0 kg.d)*

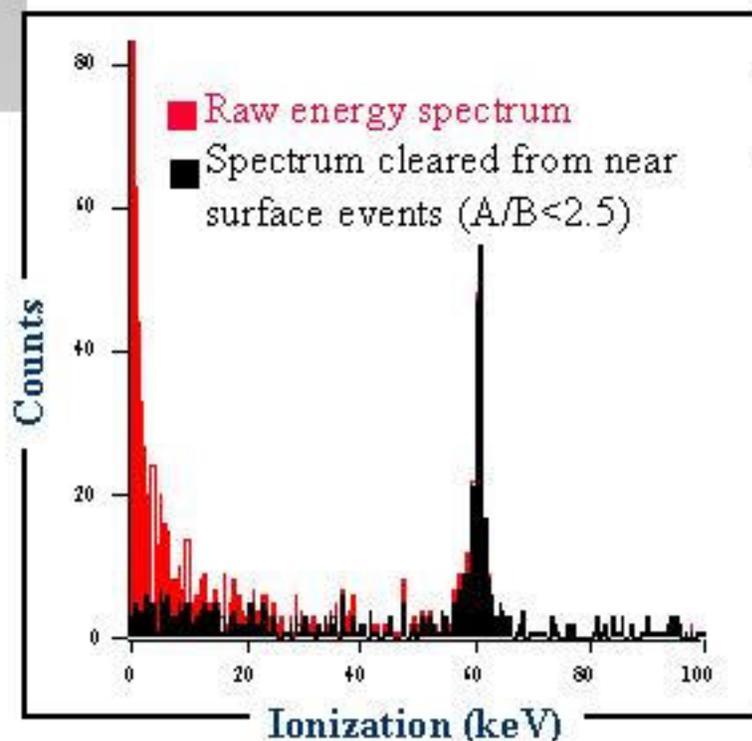

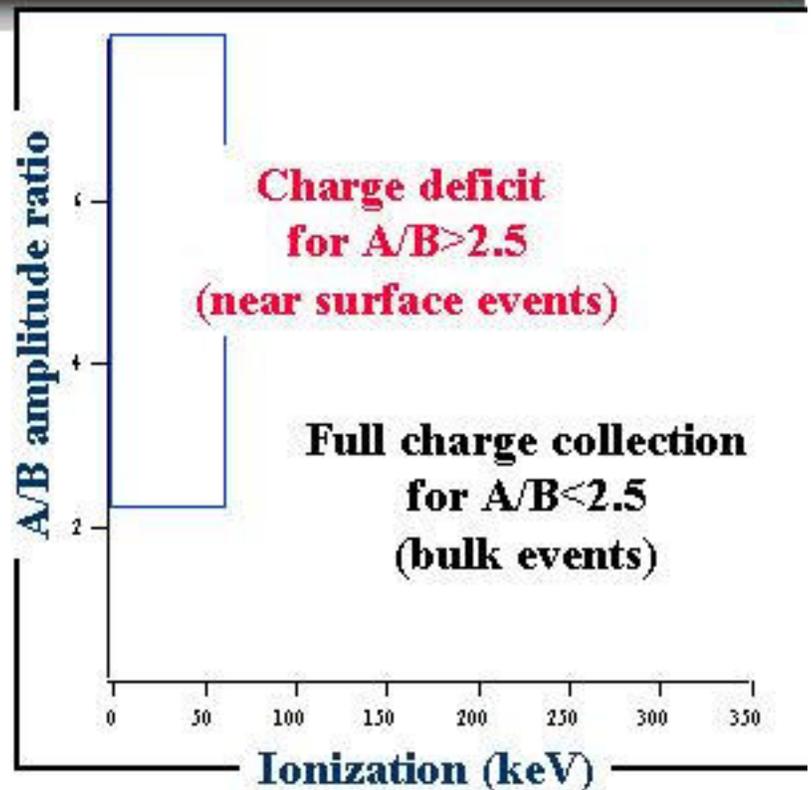

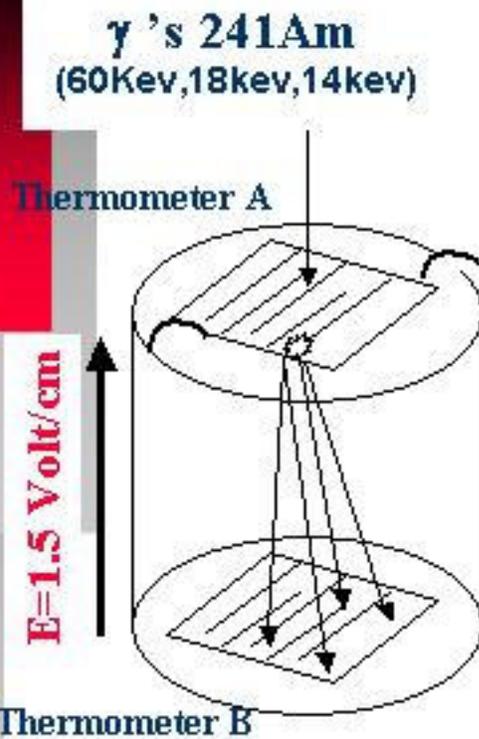

# *EDELWEISS-II detector setup*

*(Phase 21\*320g detectors approved, 2004)*

- *100 liter cryostat for up to 120 detectors : 36 kg Ge*
- *Development of NbSi thin layers to eliminate surface events*
- *Improve sensitivity by factor 100*

*Surface event rejection*  
*Ballistic phonon detection with Nb Si thin layers*  
*Ge bolometer (35g) (heat & ionization)*

**• Allows to reject surface events down to the energy threshold**
